Heater Shield

Is a cost effective way to minimize limescale damage and corrosion to heating elements and other parts in tank & tankless water heaters.

The included high capacity proprietary filter reduces salt, dirt, rust, sediment and inhibits scale.

WATER CONDITIONING ALTERNATIVES

ScaleMaster®

The ScaleMaster® produces an oscillating electric field in the water pipe which changes the hardness minerals so they stay in a soluble format.

- Increases Water Heater Efficiency
- Prevents Hard Water Deposits
- Reduces Detergent Use
- No Plumbing Needed
- No Salt Or Chemicals
- No Maintenance

MagnaSoft®

This complete treatment system contains high quality granular activated carbon combined with the MagnaSoft® conditioning media, which contains Neodymium Magnets and a combined magnetic pulling force of over 500 lbs.

This force created by reversed polarity breaks apart calcium and magnesium molecules. The result is pure conditioned water.

\$398

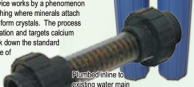

10x54" system

MagnaZone®

The MagnaZone® anti-scale system comes in 3/4" or 1" ports. The system combines a dual filtration system with sediment and carbon filters and a specialized anti-scaling device.

The anti-scale device works by a phenomenon called lattice matching where minerals attach to each other and form crystals. The process is known as nucleation and targets calcium carbonate to break down the standard molecular structure of 'hardness.'

- No Chemicals
- No change in taste or feel
- Reduces Calcium deposits
- Reduces soap & detergent requirements

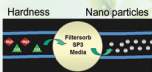

\$287

1" ports

Filtersorb SP3®

The Eco-friendly Filtersorb® antiscalant systems use no salt, no drain, no electricity and no maintenance. Catalytic media accelerates the transformation of the calcium and magnesium minerals out of the water solution into harmless nano sized crystal particles.

\$559

9x48" system
