

Ceramic Media and Far-infrared Ceramic Balls

In addition to acting as an anti-ageing agent, it strengthens the body's resistance to infectious diseases, increasing the oxygen capacity of blood, and improves stress tolerance. Also, it improves the balance of blood pressure, blood sugar, and increases oxygen and nutrients in your cells resulting in increased muscle strength, vitality and mental stability. Natural wavelengths of far infrared light, for example, are essential for bone growth as well as preventing osteoporosis, regulating hormonal functions and boosting your immune system.

If used for a long time with a filtered water system, not only can it add to the body zinc, lithium, iodine, selenium and over 20 other trace elements, but also regulates micro-organisms cycles, improves the body immune capacity. This development of new antibacterial, activation, and adsorption, filtering water purification products is manufactured with unique high-quality materials. From the outside of the ceramic ball, the far-infrared emission rate is high and the product water will be fully rich in zinc, lithium, iodine, selenium and other essential trace elements. Slowly and evenly elements are combined to the product water.

Bio Ceramic Ball detail

The energy ball's main ingredient is tourmaline, which can improve the water PH. It is a physical reaction, not a chemical reaction. Potential negative ions are produced by the weak ionization from the link between function material Mg and water. Negative ions can make some weak radiation, because of raw material ion powder, which acts as a semiconductor.

Tourmaline ceramic balls advantages:

(1)Can permanently produce the weak current of 0.06mA, which is similar to the current of nerves for smooth blood circulation.

(2)Produces Negative Ions

Negative ions, are also known as air vitamins. They can help to regulate the human body ion balance, make physical and metal relaxation, activated the cells, improve the natural cure rate and so on. Negative ions also control the oxidation of the body. In today's environment, many factors can produce positive ions, which cause tension for the body, making negative ions essential.

(3)Reduce the beam of water molecules

Water molecules (H₂O) do not exist alone; its elements combine to form a molecular beam. The smaller water in the molecular beam can remove chlorine or impurities. It tastes good and also can improve the penetration of the body's cells.

(4)Radiates far infrared (4-14 micron wave length infrared)

Far infrared can penetrate the deeper parts of the body, the warmth of cells and promote blood circulation, and smooth the metabolism. Far infrared tourmaline radiates at 100%, much higher than that of other minerals.

(5)Distributing Minerals Effectively

Tourmaline has a variety of natural minerals, many of which are very necessary minerals of ones body.

Media Levels

Bio Ceramic (tourmaline)

Mai Fan Ball

Far Infrared Ceramic Ball

Alkali Energy Ceramic Ball

Negative Potential Ceramic Ball

Some of the vital minerals released by ionized ceramics:

K, Ca, Mg, Mn, Sr, Zn, Ba, Cr, V, Ni, Co, Cu, Fe, Al, Na, H₂SiO₃, AG, P, La, CE, Nb. . .
