JANUARY 1, 2009

Plastic Fittings That Revolutionized The Techniques of Connecting Tubes.

JACO understands the needs of the plastics industry – from knowing how businesses operate to in-depth engineering design and applications.

For over 50 years, we have constantly looked for ways to make plastic parts better. And we've developed solutions in new technologies, equipment and products that have been solid contributors to industry.

JACO's innovative engineering, combined with our ability to produce precision plastic parts, led to the development of our compression fittings line.

Compression type metallic fittings have a loose ferrule which requires extra assembly. JACO has been able to mold the sleeve as an integral part of the nut, eliminating the need for a two-piece assembly.

Although fittings were originally developed for copper tubing, other fittings were then later engineered with plastic grippers for plastic tubing.

Today, JACO fittings are widely used with all types of tubing including copper, plastic, aluminum and glass.

JACO compression fittings typically cost less than metal fittings and they offer better resistance to corrosion and chemicals. Additionally, we offer four different plastic resins for a range of applications dealing with temperatures, acids and chemicals. JACO plastic fittings offer these additional advantages:

- ◆ Good electrical insulating qualities which eliminate electrolytic action that usually corrodes tubing when dissimilar metal meets a fitting.

- ◆ The ability to absorb mechanical and acoustical vibrations because of the low density and softness of plastic.
- ◆ An inherently low resistance to flow, due to smooth internal surface.
- ◆ A resistance to scale buildup.

Fittings are available in size ranges from 1/8" through 7/8" tube O.D. in all common configurations, such as union, bulkhead, male and female connectors, male branch and male run tees, tee unions and ferrule nuts. Metric sizes are also available on a special order basis.

Various resins are used, depending on the application. JACO plastic fittings are made of either nylon, acetal copolymer, polypropylene, or polyvinylidene fluoride.

HOW TO SELECT MATERIALS

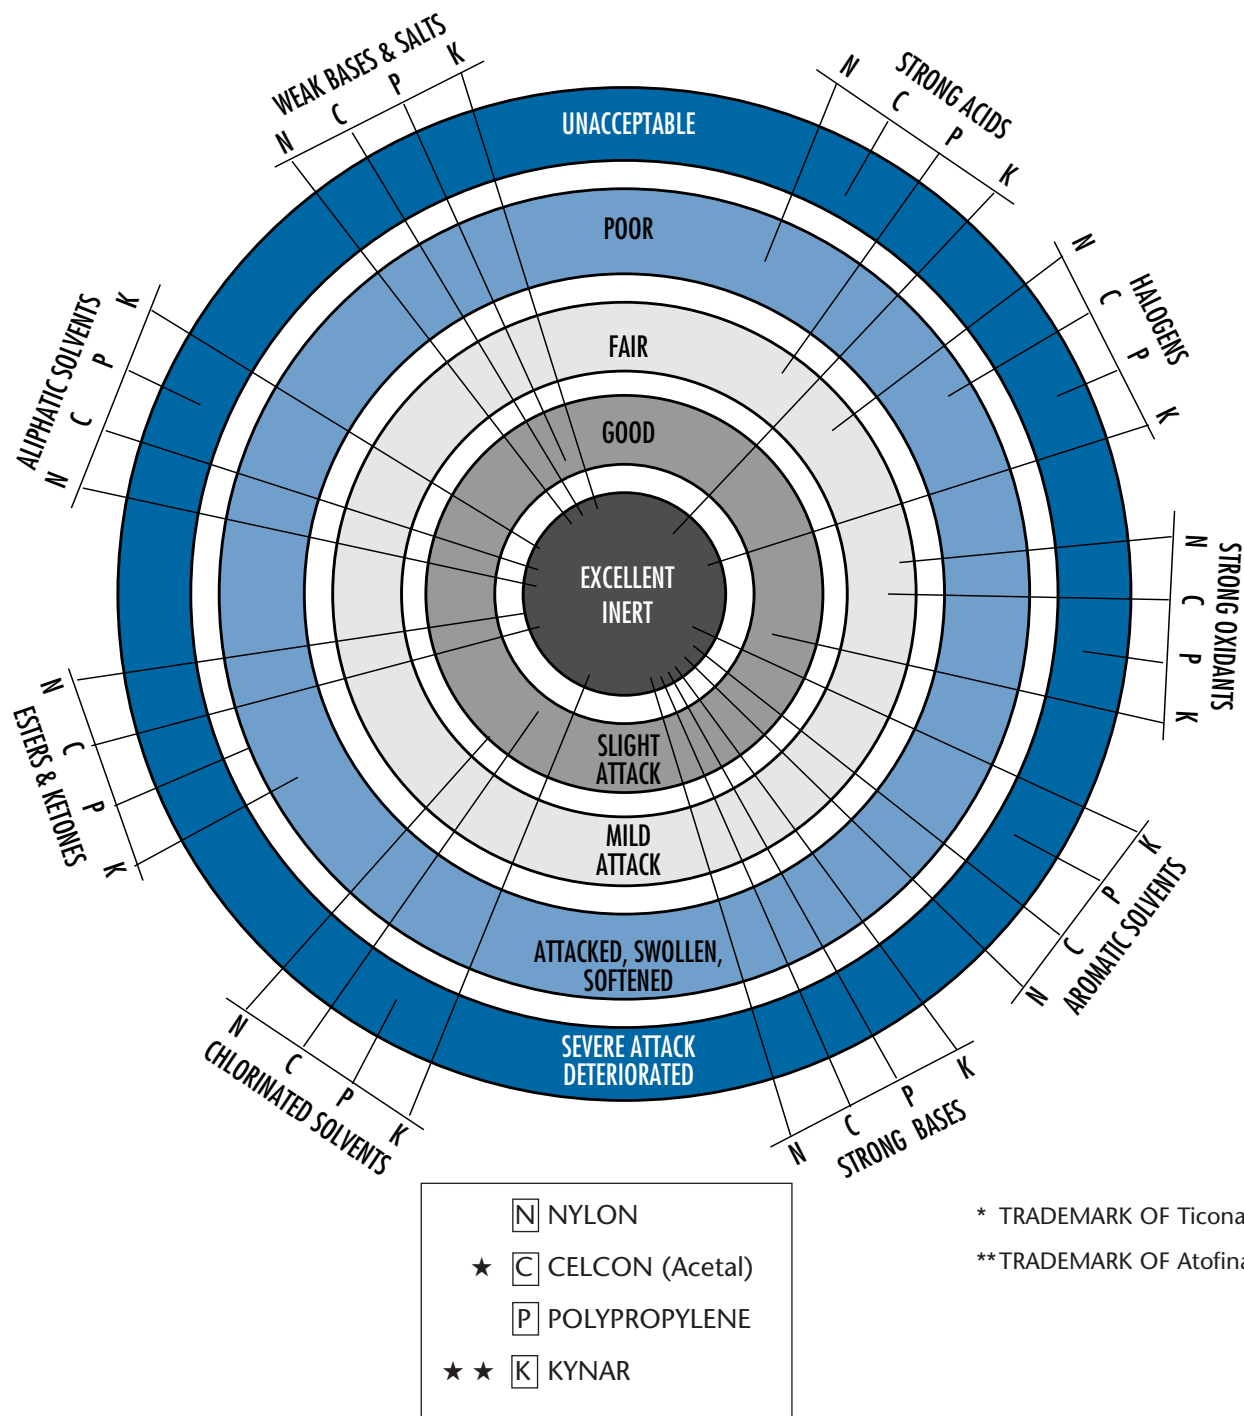

(N) Nylon has good resistance to organic solvents, oils and gasoline. Good strength at high temperatures. Material rating: -40° to 200°F. Cold and hot-water applications. Longtime weathering resistance. Good impact resistance, both single and repeated. Not recommended for use with ammonium, boric acid, calcium, sulfuric acid, or hydrochloric acid. F.D.A. listed. Also N.S.F. listed.

(C) Celcon, or acetal copolymer, has high tensile strength and good impact resistance over a broad temperature range. Translucent white color. Not affected by continuous hot-water service and works smoothly with metal tubing. Celcon cannot be recommended for continuous exposure to solutions with a chlorine

concentration greater than 1 ppm. Material is rated at -40° to 200°F in open air, and rated for 180°F in water applications. Unaffected by most inorganics, except sulfuric, nitric and hydrochloric acids. Listed by U.S.D.A. and F.D.A. for coffee, milk and antibiotics. Also N.S.F. listed. Should not be continuously exposed to sunlight.

(P) Polypropylene has good chemical resistance. Material is rated at -30 to 215°. Opaque, white color. Unaffected by most weak acids and alkalis. Below 175°F it has good resistance to organic solvents. Do not use with oxidants or strong acids or in continuous sunlight. N.S.F. listed. 20% glass filled for improved stiffness.

(K) Kynar, a polyvinylidene fluoride, has outstanding chemical resistance for handling highly corrosive fluids. Material rated at -80 to 275°, with a cloudy, white color. F.D.A. listed, N.S.F. Listed.

* TRADEMARK OF Ticona

**TRADEMARK OF Atofina Chemicals, Inc.

Operating temperatures of JACO Tube Fittings are regulated by ambient and fluid temperatures, type of fluid being carried, tubing type, and conditions of mechanical abuse. Temperatures listed are designated as material ratings only. Testing of complete fitting in customer application is recommended.

HOW TO ORDER JACO TUBE COMPRESSION FITTINGS

The part number for JACO compression Fittings is designed so that each number and letter immediately identifies the shape, size and material.

For example: the first number identifies the shape, I.E.

10 = Male Connector,
25 = Female Connector,
50 = Union Elbow, etc.

The second number designates the tube size, in 1/16" increments, I.E.

4 = 1/4" O.D. Tubing,
8 = 1/2" O.D. Tubing.

The third number, also in 1/16" increments, (unless a Union type fitting is required), designates the pipe size.

The letter following the numbers indicates the material:

K = Kynar
N = Nylon
P = Polypropylene
C = Celcon

The last letter(s) denote the nut desired:

O = Standard - *50 P.S.I.
P.G. = Plastic Gripper for
plastic tubing -
*220 P.S.I.
S.G. = Stainless Steel Gripper
for use with hard
surfaced tubing -
*220 P.S.I.

It is not necessary to designate the nut size when ordering complete units as this will be determined by the tube size indication in the part number.

FERRULE NUT
WITH INTEGRAL SLEEVE
LOW PRESSURE APPLICATIONS
SOFT PLASTIC TUBING
*50 P.S.I.

WITH PLASTIC GRIPPER
FOR USE WITH PLASTIC TUBING
FOR SURE GRIP
*220 P.S.I.

WITH STAINLESS STEEL GRIPPER
FOR USE WITH HARD AND SMOOTH
SURFACED TUBING
*220 P.S.I.

Note: Fitting dimensions as described in this brochure may not reflect running changes made to improve part performance. Check with JACO Manufacturing Company in critical applications.

*Operating pressures of JACO Tube Fittings are regulated by ambient and fluid temperatures, type of fluid being carried, tubing type, and conditions of mechanical abuse. Pressures in excess of above specifications in all fitting sizes should be tested by the customer in their particular application.

Terms

Prices subject to change without notice.
Fittings are priced as complete units.
Ordering Nuts and Bodies separately will not raise quantity to higher discount schedule.
Pricing is based on per order per release.
Discounts apply only to pack quantities.

TERMS: NET 30 Days

FREIGHT: F.O.B. Berea, Ohio U.S.A.

MINIMUM ORDER U.S.A. \$100.00 NET;
FOREIGN \$150.00 NET

DISCOUNTS APPLY ONLY IF INVOICE TERMS
ARE MET.

INSTALLATION INSTRUCTIONS FOR JACO TUBE FITTINGS

1. Cut the tubing end squarely and remove the internal and external burrs.
2. Insert the tubing through the back of the nut all the way through the nut assembly to the tube stop in the fitting body (see illustration). If the tubing does not enter the nut easily, loosen the nut one turn and then insert the tubing all the way to the tube stop in the fitting body.
3. Turn the nut hand tight.
4. Wrench tighten the nut 1-1/2 - 2 turns.
5. All nuts must be retightened when the system reaches projected operating temperature.

NOTE: Squeaking sound when tightening nut is normal. For pipe threaded connections, Teflon Tape* must be used.

*Dupont's Reg. T.M. Patent 1983

Caution: To insure proper assembly, tubing MUST be fully inserted into the fitting body to the tube stop.

ASSEMBLY INSTRUCTIONS FOR JACO NUTS

Please follow these diagrams in assembling nuts.
As shown below, insert gripper (B) into nut (A).
Push sleeve (C) into nut assembly.

NOTE: It is not necessary to disassemble this fitting for application. Merely insert tubing to stop and tighten nut.

In-House Tooling and Manufacturing Ensure Quality.

JACO is the most unique fittings company in the industry because it engineers and designs its own fittings, constructs the tooling, and then molds the fittings — all in-house.

JACO's many years as a custom injection molder, designing and producing a wide range of precision, close tolerance parts, has provided the company with the expertise to develop high quality fittings and check valves. By having total control of all manufacturing aspects from design through production, JACO can also control the quality.

JACO's Engineering Group prepares fittings concepts into detailed engineering drawings. In JACO's Tooling Group, tooling experts use sophisticated equipment to design and craft the most complex of molds. JACO has built many varieties of fitting molds and has gained expertise in the

JACO's Tooling Group creates high precision molds used to manufacture JACO compression plastic tube fittings.

development of threaded parts. A full complement of CNC and EDM machines, staffed by a team of professionals, deliver superior quality molds.

After tooling, the work transfers to JACO's Molding Group, which utilizes more than 75 injection molding machines. Each day, thousands of fittings are molded to close tolerances with unfailing repeatability.

In order to consistently meet all customer requirements and continually increase customer satisfaction, JACO is committed to the continuous improvement of our products,

our services, and our Quality Management System. This total commitment to Quality has enabled JACO to build and maintain a reputation of absolute trustworthiness. We are committed to providing the people and resources necessary to ensure the highest quality parts. This goal is achievable

with the assistance of JACO's highly trained Quality Assurance Team which accurately measures parts using precision gauges and instrumentation. With the company's various capabilities, it can continuously insure the quality and capability of JACO fittings.

A full complement of CNC and EDM machines ensure accuracy and quality during the mold manufacturing process.

*Specializing in the manufacture
of small, close tolerance plastic parts*
